4 in 1 universal remote manual

Navigation is simple with tactical menu keys. It's classic design keeps it simple to use and to program. We are currently operating from 10 AM to 7 PM EST Monday through Friday. As the outbreak is still developing, the situation is fluid, and these hours could change further. We apologize for any inconvenience this causes and ask for your patience during this time. Here's how you can get it under control with one option, the Inteset 4in1 Universal Remote. The age-old solution of adding a universal remote to the mix might be your best bet. The Inteset 4in1 Universal Remote is an affordable remote that works with over 100,000 devices, comes with support for some of the most popular streamer settop boxes and can be customprogrammed. It's an affordable remote and a breeze to set up. Here's how it's done. Apple TV You might be inclined to set up the Inteset remote with your television first, but if you've got an Apple TV, you might want to start with that. Out of the box, the Inteset 4in1 Universal Remote is programmed to control the Apple TV on the A device channel. Select Start to begin. The onscreen instructions will walk you through the mapping process. You're free to map the remote how you want, but if you need a guide, you can find the default mapping by going to remotecontrol.inteset.com and hovering your cursor over the Apple TV picture. Alternatively, you can add the Apple TV programming to the Inteset remote by pressing and holding the SET button until the LED indicator flashes twice, then press 02615. This will automatically add the default Apple TV key mapping to your Inteset remote. Television Fortunately, Inteset has a large database of setup codes, and you can search for your TV brand here. There will likely be multiple codes for your television's manufacturer. You will have to use trial and error to determine which is the correct code. Once you've located the codes, power the television off, then manually turn it back on without a remote. <http://nnt52.ru/userfiles/cominox-sterilclave-18s-manual.xml>

Next, choose which one of the four channels you want to use A, B, C or D and press the corresponding button near the top of the remote. Press and hold the SET button until the LED indicator at the top of the remote flashes twice, then enter one of the five-digit codes. The LED indicator will flash twice once more. To test if the code worked, press the Power button. If the television doesn't power off, hold the SET button once more and try the next five-digit code. Repeat until you find the correct code. Manually add a remote If you cannot find the setup codes for your television or none of the codes work, you will need to manually program the remote using your existing remote. To put the Inteset remote into its learning mode Press one of the device channel buttons A, B, C or D and hold the SET button until the LED flashes twice. Enter 975. The LED will blink twice. While pointing the two remotes at one another, only a few inches apart, press the button that you want to learn on the Inteset remote. The LED indicator will be solidly lit for several seconds. On the original remote, press the corresponding button quickly. Next, on the Inteset remote, press the next button you want it to learn, followed by the corresponding button on the original remote. Repeat this process until the Inteset has learned all the compatible functions of the original remote. You can program up to 75 buttons, but the capacity varies based on the IR codes from the original remote. Other devices If you want to use the Inteset remote to control any other

supported device, you just need to use the Device Setup Code Lookup tool on Intesets website to locate the setup codes. After you have all the codes you need, its a simple as selecting a device channel on the remote, holding the SET button until the LED flashes twice and entering a code.<http://adepotcustom.com/UploadFiles/20200908192047152.xml>

Factory resetting the remote If you need to replace a device with a new one, simply program the new device over the old one. However, if you need to factoryreset the remote, press and hold the SET button until the LED flashes twice, then enter 977. The LED will flash twice again, indicating that the remote has been restored to default settings and all programming has been removed. The database is continuously being updated, which means you can keep up with the latest hi tech trends, now and in the coming years. Its thin and works very well. The only downside to my understanding is that it only holds your codes for your devices for 10 minutes if the batteries die completely, but keep some batteries around, and don't worry about missing remotes or having to juggle up to four of them instead of this great product. One code provided for Zenith and it worked marvelously.

The remote, albeit cheap doesn't necessarily feel cheap in the hand like the other junky one I got at

Big Lots. Its got a nice solid feel to it. And at the price, you can easily. So, as a service to humankind, here are some instructions in a font you can read, copy and paste and enlarge to whatever level you need. Comes with a bracket customized for your remote type no universal BS straight from amazon. Roku bracket is ordered separately I believe If anyone has suffered from the terror of toddlers making off with 1 of your remotes leaving you without sound this is the way to fly. Thank you for this product. It was clearly well thought out. Being in IT people often ask me for personal technology recommendations, but I usually try to avoid it lest I be stuck supporting it. You are the first product in 5 years I actually made a legitimate post on Facebook talking about how greatly this item performs its intended purpose. Flawless execution! Comes with side click, battery,. The material seems inferior to the original. There is no keyboard on the reverse side, like the original. Out the box, it works like the original. I did not have to set up anything, or program it. So, I guess Ill hold on to it for now. That surprise also came with a bit of hesitation because I had never heard of Inteset and reviews were so few. The price helped ease my concerns and I decided it would be worth the risk. I will begin by stating that I am more than satisfied with this purchase. For a company that I had never heard of before and a product that was so new, I would have not been shocked to find it was just some subpar quality garbage that was incorrectly advertised. It arrived in a generic white box with. I have an RCA tv that includes a dvd player I was able to find the code that configured all the settings on my TV. The remote looks great an works for my Samsung an sharp tv. an the price is a win, win Im glad that I can access the menu portion of the tv with this remote.

I deluded to buy this remote when we received a tv as a gift from a friend. They were moving and didnt need it anymore. Instead of waiting for them to find the remote and bring it back to my house I just ordered this remote instead. I like the size and simplicity of the remote. It serves the function that I need it to and doesnt mess up. Ive bought more expensive remotes that might do more things but honestly they are a waste of money! We opened the remote, pressed power and it worked. We didnt have to program it or anything. This remote can be programmed by simply aiming it at another remote and pressing a few buttons. I first programmed from a smart TV remote then from a cable box remote. Grandma is super happy! Please try again. Please try again. The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer trustworthiness. Please try again later. Amazon Customer 1.0 out of 5 stars It has eliminated a lot of functions with other remotes. I would recommend it to others. Just accept that some of the lesser used functions may not be accessible via this remote and you may have to revert to the original remote. Which functions do not populate the remote will be up to you though. So my first advice would be do not rush setting this up. So one of my problems was a Panasonic TV, Panasonic HDD recorder with DVD, a You View box and a Soundbar. These illuminate momentarily whenever a button is pressed to indicate what you are operating.

<https://eastwestmacrobotics.com/images/canon-mp480-printer-user-manual.pdf>

To change this you press the obviously positioned mode button which cycles through the four options. It should be noted that if no commands are entered into an option it is skipped and does not illuminate. Its also worth noting it is up to you what goes where so you could control two TVs, one in TV mode the other in AMP maybe. Just be aware of the limitations outlined below and where possible use the supplied codes in the correct mode for the device you wish to control. There are three ways to get this device to operate what you have; 1 using the 4 digit codes given in the

instruction manual. 2 manually by pointing the old remote at this and pressing the button you want to copy and the button on this where you want it to be. 3 universal search. Whichever method you use will require you to press the master magic button, the mode input button, then a three digit code depending on which option you have chosen followed by other simple steps depending on the option. This sounds complex but in practice is quite simple. A few things to note. When I first set up the device I decided to do it totally manually, a long slow process but one that I thought would give exactly what I wanted first time. However the device ran out of memory. This is indicated by a solid blue light rather than the normal double flash to confirm acceptance. I believe I had entered about 50 commands when this occurred. I could not find any official information about this but found that if I used the given codes to initially set up, 90% of the remote functions worked allowing me to use the obvious limited memory to adjust things to my taste i.e. no subtitle button was available so I added it manually. If there is no code in the manual for your particular device then use the universal learning option which, having tested it on some obscure items I have, seems to work for most things. Don't forget you can mix commands from different devices.

For example you use a sound bar instead of the TV speakers so having set up the TV just manually copy the volume control from the soundbar into the TV section or where ever you wish it to be. My volume control and mute is repeated across all devices so it does not matter which mode I am using the most used controls are available. I also found that the internet functions of my smart TV were not accessible and I had run out of available buttons in TV mode. Also note that the codes given in the manual are in sections so a Sony product will be in TV, DVD and AMP for example. Setting up my four devices took the best part of two hours, spread over a couple of days. It is also worth keeping the old remote to hand for a few days after because it will be an almost certainty that you will discover a missing function or ill placed button and need to alter things but once done it's well worth it. For the money there is little to criticise. Sorry, we failed to record your vote. Please try again The claim made by One For All for being guaranteed to work with all models is no lie. I have a Polaroid Freeview box that wasn't listed in the codes section at all for freeview, but was only mentioned for TV. So I used the learning feature using my worn out original remote and it worked like a charm. I was surprised that this remote needs x4 AAA batteries to run though usually remotes need x2 AAA batteries, but that really doesn't matter as it is guaranteed to work with all models. My advice would be to look at the setup tutorial on their website very helpful and I had my devices setup with a couple of minutes. Another thing is if you use the learning feature, you'll need to pair up each button you want to copy from your original remote. I paired up all of the buttons from my original remote in about 5 minutes. Definitely would recommend this to anyone and is by far the best remote I have ever purchased! Please try again I bought this to use with four devices, all well known brands and mostly important are the TalkTalk branded YouView box and a Sony smart Blu Ray player. The YouView box is one of the most common settop boxes in Britain up there with Sky and BT boxes so it beggared belief that there is no code for that device on this remote. That shouldn't be a problem though as it's possible if a little timeconsuming to copy each key's actions from the original remote to this one. I did that and everything seemed to be fine until I then needed to manually add or change keys on the other devices. No matter what I did, this OFA remote seemed to be accepting the input from the original remotes but not actually storing the information. With the other devices, the remote worked reasonably well with a Toshiba TV using the onboard codes or it would have if I'd been able to customise a couple of keys. The codes for the Sony BluRay were less successful but again, would have been fine as a basic setup if I'd been able to customise the incorrect keys. The codes for a Samsung surroundsound system were a joke and the inability to customise more than a couple of keys after

setting up the YouView box was the killer for this thing. No idea if any costs are involved or if they will at least be able to let me add the YouView box and release enough memory to be able to customise the other devices. Will wait for their response but looks like I'll be returning this to Amazon. They never asked what the issue was and don't explain what it is they will be doing. Worst of all, they say that I must complete a form which according to them is included as an attachment with the email. There is no attachment so there's no way to do anything. Bottom line this is going back to Amazon. Sorry, we failed to record your vote. Please try again A lovely weight to this control, it does not feel cheap and flimsy like most for the price.

Does not come with batteries which is to be expected, and easy to just pop a couple in the back. Very pleased and nothing negative to say about it at all. Sorry, we failed to record your vote. Please try again The one downside though, in order to program bespoke functionality, you need to have another remote control for the device you want to use it for and then you pair it up with this remote so that it can pass across information and knows what function you're trying to set. But I bought this because my original remote control is broken. I managed to get around it by installing the Sure remote control app on an old phone and using that in place of the device's original remote control in order to program this remote control. Annoyingly, like most top end smartphones of recent years, my current phone doesn't have an infrared sensor so can't be used as an IR remote which I needed because my TV is actually a monitor and so can't connect via WiFi and I want my new remote to work on that as well as the Humax box whose remote control stopped working properly but luckily I still have an old phone that has IR. But without that I've no idea how I would have programmed the bespoke functionalities. It seems odd that you would need another remote control in order to set some of the functions up on this one, given that most people are likely to want it because they've lost or broken their old one. Sorry, we failed to record your vote. Please try again Opened packet, read instruction, used magic button and was set up and using with full functionality in about 3 minutes. I really like its simplicity and ease of use, picture attached of other brands with magic abilities. Additional Bought 3 more, really impressed with ease of use. I have one for Alba2008, Walker2015 and Sony2000 TVs all synced straight away. I also have 4 android TV boxes to go with TVs and was able to manually program the buttons and functions, this is time consuming, but worth it.

Also paired them with an old Acoustic DVD player. Definitely Recommend Sorry, we failed to record your vote. Please try again Put the code in for the tv and it worked straight away, although certain functions seemed to be missing, of which more later. There wasn't even a bluray section in the code manual, but I tried a dvd code from the same manufacturer and it worked, again with a couple of missing functions. I thought this needed to be addressed and turned to the learning function now I'm very sceptical about manufacturers claims, but it really is simplicity itself hold the magic button down, press 975 and copy your buttons you can do loads at the same time if wished by pointing the remotes at each other, that's it, you're done I knew now that I'd be able to use the procedure for my Audiolab hifi system, synced em up and it works absolutely flawlessly I would unhesitatingly recommend this remote to anyone. Points to note there are several other setup methods, the foregoing are just the two I tried. Sorry, we failed to record your vote. Please try again Unfortunately this one for all remote is useless as a replacement for a freeview recorder remote. You can't tell from the pictures that it is missing these. Only the very basic buttons are catered for. After setting up the humax it wouldn't let me set up any other device. Sorry, we failed to record your vote. Please try again Having looked on the oneforall web site to confirm that the product was compatible with our TV it was duly ordered and arrived promptly On arrival the product was attempt to be set up using the instructions. There were two or three routes for set up and it looked like a failsafe system. The first method involved looking up a code for each device and entering it. Although the website had indicated compatibility, none of the codes provided in the instruction booklet worked and this included trying the codes for the manufacturer from a range of different types of device.

The instructions said that could take some time and up to 150 key presses might be required if one of the codes worked. At at three or 4 seconds for each key press and wait to see if it worked. Still no joy. On to the website to check the support. It takes quite a bit of time to find things on the site lots of irrelevant pictures and limited information. Eventually I found a promising support section as there was an option to enter the make and model of the device that was being difficult. The model number and revision number that are both needed are hidden underneath the tightly fitted batteries in the battery compartment. yes I can tolerate the odd broken nail if I can get the remote to work. Ok, I managed to enter all the details required and then I got a message that the codes were known to the company but were not in the database of the handset I had. I was instructed that I should contact the company using the information provided in the manual. By now I have spent a couple of hours wasting my time because the company had not been upfront about what was supported and what was not. OK so perhaps I will be able to get the remote control to work if contact the company. I was directed to the manual for contact details. This sounded good and I looked in in the relevant section of the manual. The only contact for the UK was the web address of the company and a premium rate 0901. The alternative they provided was also unobtainable. I had a look round the website and found I was being directed round in circles to the page referring me back to the manual. There was no contact information that I could find on the website. I now have spent well over 4 hours on this, so have cut my losses and am returning the remote to amazon. I see from other amazon reviews that the company has responded to negative feedback and asked people to contact them. however there seems to be no realistic way to contact the company.

It is the difficulty of contacting the company that is particularly irritating with the salt being rubbed into the wound by the apparent expectation of the company that even if the customer could contact them they should pay for the privilage of getting a problem resolved. In summary I suspect that if all your devices happen to be in the builtin database, the system might work well, however the handset unlike the advertising claims is not universally compatible, even with devices from common companies. Concept is great but implementation and support is appalling. Sorry, we failed to record your vote. Please try again The main reason I wanted an additional remote is that the volume control on the original LG remote is quite small and difficult to find in the dark. The one for all remote has a large silver volume control and looked ideal for the job. After I ordered the one for all, I realised that my TV remote uses radio waves like Bluetooth rather than infrared light, so I was not expecting it to work at all. However, when it arrived I did the quick set up, and to my surprise found that it did control most functions of my TV. The TV must have an infrared sensor in addition to the radio remote receiver. It is doing the main thing I bought it for, that is the volume control and channel changes work. The reason for the 3 star review is that the learning functions of the remote wont work in my case. If you are buying this for a newer TV with a radio remote, or something like a firestick, be aware that it cant learn from such a remote. 100% compatibility Not really. Sorry, we failed to record your vote. Please try again Fazit Sie kann! Die Einrichtung ging zwar nicht in Sekundenschnelle, aber letztendlich habe ich ihr alle Funktionen beigebracht, die bisher auf 3 Geraten verteilt waren und 9 Batterien benötigten. Die Essence 4 benötigt 4 AAA Batterien, die nicht im Lieferumfang enthalten sind.

Also Batterien rein, Beschreibung zur Hand genommen und los gehts Ich habe einen Grundig TV, einen SMART SATReciever und eine SAMSUNG 51 Anlage mit Blue Ray Player. Obwohl das TVGerat und und die Samsung Anlage in der sog. Schnellspeicherliste enthalten waren, deren Einrichtung mit nur 3 Klicks geschieht, waren danach nicht alle Funktionen verfügbar. Der Reciever musste mittels CodeTabelle eingerichtet werden. Mit dem dritten von 4 Codes zu Smart Recievern hatte ich dann Glück. Da die Essence 4 eine Lernfunktion hat, wollte ich ihr also noch die fehlenden Funktionen meiner bisherigen Fernbedienungen beibringen. Beim TV bin ich mit der returnTaste zuerst gescheitert. Hier hat die Bedienungsanleitung eine kleine Schwache Sie sagt nur, dass man die Taste auf der OriginalFB drucken muss. Tatsächlich muss man sie festhalten bis die blaue LED

auf der Essence 4 zwei Mal blinkt. Dann noch 1x die MagicTaste drucken und die Essence 4 legt die ausgewählte Funktion auf der vorher bestimmten Taste ab. Auf diese Weise habe ich dann alle benötigten Funktionen noch auf die Essence 4 ruberkopiert und gut. Es funktionieren alle 3 Geräte einwandfrei mit nur einer FB, die zudem auch noch eine Funktion hat, mit der man alle Geräte durch einen Tastendruck ein bzw. Sorry, we failed to record your vote. Please try again To our utter amazement on the very first attempt at programming it and by using the first code given on the make of our player it worked immediately, I can only say that we were not only stunned but also, extremely impressed and that is why I am taking the time to write this review. Highly recommended !Sorry, we failed to record your vote. Please try again This remote had all the symbols that you can program for the Apple TV with the exception of the rewind 10 sec function which i assigned to the mute key which is just under a similar symbol for skip 10 sec button between vol and channel keys.

There is an Apple code in the manual, but did not have all the functionality for the 4th Gen. So although I was happy with the original Apple TV remote, I love the fact this is far more accurate especially when the kids are using the Apple TV where I dont have to worry about them breaking the expensive original Apple remote. Sorry, we failed to record your vote. Please try again J'ai trouve la telecommande qui pilote les deux. Je sais que des telecommandes plus elevees en prix pouvaient le faire avec programmation des activites, mais pour pour cela reste cher pour au final une telecommande et l'usage que je veux faire avec. Sorry, we failed to record your vote. Please try again The set up was up to five button presses or steps to do a specific thing and the instructions are very clear. I was able to get the blu ray player going and the buttons allowed me to access play pause etc and the menu for subtitles etc and eject so thats a success. I then got it to work on my TV it wouldn't learn the code but was able to learn directly by me pressing the button until it turned off. Then I learnt how to teach this one to have the same buttons in the same places as my TV remote meaning it's exactly the same. What I will point out is that to turn up the TV while watching a DVD or blue ray you would need to put it in to TV mode an easy thing to do once you know how. Made up cos doesn't expect it to work. My TV is Technika and blu ray is LG. I'm gonna ask and see if anyone knows how and if I can set it up for an Xbox 360 I think it should. What a relief cos one I didn't think it would work and two I didn't think it'd be so easy. It was cool having the remotes teach each other well old one teaches new one and you can tell it works by the lights on it blinking etc. Will be able to watch my first ever blu ray Alita Battle Angel which looks amazing think I'll get me some Kubrick classics too. Sorry, we failed to record your vote. Please try again.
