The actual Open Box product may differ in packaging and included accessories, but has been tested to ensure basic functionality. This efficient board supports up to 1GB of PC133 RAM for most of your multiple function system needs. This is a solid, midrange board for the home or office, at an excellent price. My old HP board wouldn't go over 600MHz, and 384MB. Board has been stable from day one for four months, even after maxing out the RAM and CPU. Via Hardware Monitor application included helps keep an eye on temps and voltages. See other thoughts. This all started when a new video card ate the PSU in the HP. Picked up this board, new case, PSU, and CPU cooler from New Egg; Grabbed a PIII 1.2, and a PC133 512 stick used online. Kept all my hds, and opticals. Way less money than a new rig. Great XP combo for all applications unless you're a real gamer. DFI CA64TC, 1024MB PC133, PIII 1.2GHz, HIPRO TOP500P5 PSU, Rosewill R6A34 case, MASSCOOL 5F263B1M3 80mm Ball CPU Cooler. GeForce FX5200 PCIDFIS last BIOS update was done in 02 for this board. It runs high end graphics cards, and easy to understand instructions. Onboard sound is decent. Even with a PCI video card and SCSI hard drive installed, the S3 standby feature worked flawlessly. The BIOS has temperature monitoring. As long as the Operating system is kept clean everything still runs fast! After installing Windows 2000 SP4 some drivers had to be manually installed. Lower end but solid and well supported chipset. Lots of PCI slots. ISA slot for that old card you just can't live without. Manual could be a bit clearer about the jumper block settings black vs. <http://mistlondon.com/userfiles/deutz-f411011-service-manual.xml>

I think a fair amount of technical knowledge is expected by the manufacturers to do so, rightSet up was easy though assembly did give me some flashbacks to 1998 or so, documentation was acceptable. Did I mention it has an ISA slotNo onboard Ethernet. I kind of hate the socket 370 heatsink mounts. Had to go elsewhere to get a copro.Old technology in new cases really brightens up the workplace too.The customer did not have funds to replace the specialty ISA card. The hard drive is detected with no problem in the BIOS and also on start up POST, able to boot up Linux Live CDs but the hard drive is just not being detected in Windows setup. Here is the exact error message. Make sure any hard disk drives are powered on and properly connected to your computer, and that any diskrelated hardware configuration is correct. This may involve running a manufacturersupplied diagnostic or setup program. Setup cannot continue. To quit Setup, press F3. This problem is quite a common one and is simply due to the fact that when Windows XP was created, the SATA chipset

itself and SATA hard drives weren't available to the masses, so support for it wasn't included in the XP setup process. As most computers within the last decade or so have some form of SATA controller, if you try to install Windows onto a SATA drive, XP won't recognize it because the drivers aren't present on the installation disc, so they need to be loaded manually for the drive to be picked up. Most BIOSs for several years have included a fallback mode to enable a SATA drive to behave like an IDE drive, and therefore makes it visible to XP during setup. The problem with this setting is it comes under several different names and can be found in different sections within the BIOS.

It depends entirely on the computer or motherboards make, model and manufacturer to know which setting you have and where it is. If you have a manual, it's certainly worth reading. Don't confuse this option with a similar one which will disable the SATA controller completely. This method obviously gets around the problem of XP not having the drivers on the install CD by you providing them manually. Windows XP setup won't recognize USB flash drives, so you need to have an internal floppy drive available, many USB floppy drives will also work though. As you can see in the image below, it clearly states that the SATA RAID driver is for use on floppy drives. You need to make sure any drivers you download are explicitly designed for putting onto a floppy and not a generic driver, usually the file will be around 1MB or lower which is a good sign it's likely to be the correct driver. Insert the Windows XP CD and boot it up. Pay attention to the next blue colored windows setup screen. After loading some files, you will come to a screen that says the following Select the appropriate driver and continue the Windows XP installation. The setup will continue and this time it will recognize the SATA hard disk drive in your PC. This problem is quite common when trying to install Windows XP on newer computers because most if not all are using SATA hard drives. After installing Windows XP, you can easily and automatically install all required device drivers using the DriverPack Solution disc. If you thought it wasn't possible to use a USB flash drive instead of a floppy drive to load the drivers during the F6 phase, we have a solution that could !!!What is wrong Or a very large and wobbly hacker. Only one financial person to do paper work. They need more employees. But I love my truck. If the vehicle would have been detailed before the test drive it would have been a five star experience. I really enjoyed it. Thank you. Easy 20 mins of my life. No pressure just great customer service all the way through. Had the Highly recommended. They were completely professional and provided prompt service. The only thing that turned me away from buying the Corolla that I went to see was the fact that it had an accident on its car fax which wasnt listed on Car Gurus. When I asked if they knew what type of accident the car was involved in they said they didnt know. Since then I have purchased a Corolla I like elsewhere. They have all models no need to go looking in different locations. Car was unclean and damaged and we did not The SUV pictures posted looked like it was bone stock, not sure what other extras it had that would bump up the price. Salesperson really friendly. Very satisfied. Looking to work with them in future. The staff was nice, knowledgeable, and no BS. Highly recommend! Make it really easy to buy a I waited and called and texted for 45 minutes.no response. 2 hours later the salesman asked if anyone helped me. 2 HOURS LATER! Im only giving 1 star because I have to so I can leave this review. Explains the low prices but no clue to know what you're really purchasing However, I wasn't able to get down there to take a look at the Sienna for sale. Looking to make a sale. Regardless of outcome good communication. I was waiting for a counter offer, but no. I didnt end up buying the vehicle but Ocean Subaru was pleasant nonetheless. After all, over 30 million shoppers use CarGurus to find great deals on used cars and new cars in their area. And when its time to get rid of your old ride, sell your car simply and securely on CarGurus.
