Yesterday I found out that my prebuilt PCs motherboard, a Fujitsu D3222A12, has 2 psu ports. An 18pin one, and a 24pin one. My psu is already connected to the 18pin port, but there is no port on where it should be for the 24pins. Just a black spot with 24 silver dots on top of the board. Here is the motherboards manual. Any solution on that one Thanks The idea is to make it so you cannot

upgrade your system and, hopefully when the time comes, you'll purchase another new computer from the same company. No tech is going to attempt to install a 24pin PSU connector and if they did, they would certainly charge you more than the cost of a new motherboard. Time to start saving for a new computer. Wolf sends You just happen to have the 18 pin version. There may be components on the board designed to work with the 18 pin power delivery but not the 24 pin. What is the reason you want a 24 pin connector on the board I don't know if I have the funds for that. Can't a technician add the missing 24 pins. Can't I just buy an 18 to 24 pin adaptor from Amazon I don't know if I have the funds for that. Can't I just buy an 18 to 24 pin adaptor from Amazon Maybe when Fujitsu fit this board with a 24 pin connector they put different chips on the board to handle the difference in power delivery. You said your PSU is connected to the only power socket on the board no, the 18 pin one, so what is the problem. Did the PSU die There are adapters which will turn a 24pin supply into an 18pin supply but not the other way around obviously, so if you have a 24 pin PSU you want to use to power the 18 pin board you can try that. Would probably be cheaper to buy a new PSU than a new mobo though no I plan on buying the Corsair VS650, and install it. Current PSU has 18pin output, and the Corsair has 24pin output.

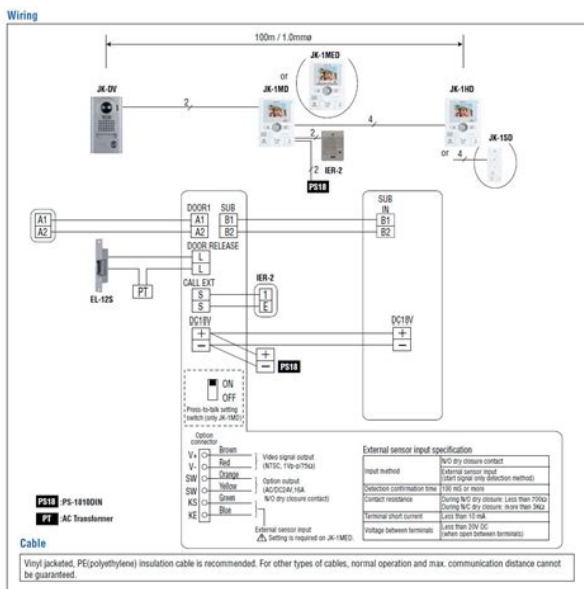

My motherboard has both a 18pin, AND a 24pin input, but the 24 one is just missing Here is how the motherboard looks like The idea is to make it so you cannot upgrade your system and, hopefully when the time comes, you'll purchase another new computer from the same company. Time to start saving for a new computer. Wolf sends You'll note there are 12 additional dots there. In the previously linked image, that is where the power cable connects. Wolf sends There are CLEARLY 18 pins on the top left port and 24 on the mid right one There are CLEARLY 18 pins on the top left port and 24 on the mid right one We are working every day to make sure our community is one of the best. The use of identical components within the family ensures perfect infrastructure compatibility. Capacity per channel has to be the same. Adjustable headband and microphone provides the perfect fit for everyone. The keyboard is made out of 45% renewable raw material and comes with a PVC free USB cable. In addition, the KBPC PX ECO offers first class comfort and ergonomics. It attracts attention with its impressive modern design and useful extras.
